

A large-scale photograph of a wind farm at sunset. The sky is a warm orange and yellow, with several birds in flight. In the foreground, two workers in safety gear stand on a large white wind turbine blade, looking out over a vast field of similar turbines. The image is framed by a dark red geometric shape in the top right corner.

Colbún's Horizonte Wind Project

**The second largest wind
power plant in Latin
America**

US \$900m

invested, making the
Horizonte Wind Project
the largest power
generation facility in Chile
across all technologies in
terms of generation
capacity - 816 MW and
140 wind turbines.

Local focus

From employment through to the supply chain, the project maintains a strong local focus within the Taltal municipality, benefitting locals & SMEs.

Horizonteduca -
Colbún's educational
program in partnership
with the local authority,
allows students and interns
to gain certification while
working within the project.

The Horizonte Wind Project expects to produce 2,450 GWh annually, supplying energy to over

715,000

households. This will prevent the emission of half a million tons of CO₂ - equivalent to removing 130,000 vehicles from circulation annually.
